

Chemical Investigation

The prevalence of new buildings and furnishings, high use of particle board, and lower awareness of healthy construction makes formaldehyde and other VOCs a significant issue. Although the Chinese Government has issued a series of standards to regulate formaldehyde exposure, lack of enforcement and regulation often lead to concentrations in homes, offices, and public places exceeding the national standard. In addition, homes here have the same pollution sources as they do elsewhere: household cleaning agents, mold, cooking, dust mites and pet dander, just to name a few. Together, this leads to a level of indoor air quality that poses an unacceptable level of risk to our health as well as our comfort.

Eye and respiratory tract irritation, headaches, dizziness, visual disorders, and memory impairment are among the immediate symptoms that some people have experienced soon after exposure to some organic compounds. Some compounds are also carcinogens (cancer causing agents)—studies show that prolonged exposure to certain compounds in the indoor environment can increase the risk of developing leukemia, lymphoma, and other cancers.

In this Chemical Investigation package, PureLiving uses a combination of direct read sniffer testing and lab spectrometry analysis to precisely identify TVOC content and levels in air and common household furnishings/objects.

Chemical Investigation package includes:

- English-speaking on-site home inspection and testing for common pollutants
- Test instruments are top-of-the-line calibrated equipment
- Full analysis in easy-to-understand format
- Personal debriefing with recommended solutions to address any shortcomings

Chemical Investigation package description:

This program is comprised of three components: **air testing (3 points), TVOC sniffer testing (3 sources) and free efficiency check of existing filtration systems.**

3 Air Tests include <ul style="list-style-type: none">● TVOC● Formaldehyde● Benzene	3 Sniffer Tests include <ul style="list-style-type: none">● Use direct read instrument to “sniff” out TVOC from 3 sources
Plus <ul style="list-style-type: none">● Free efficiency check of existing filtration systems in your home	

Chemical Investigation package price is 3,585 RMB

Additional options for this package:

- Add rooms for testing: 849 RMB per room

We offer many other specialized testing options, including:

- Home air and water quality analysis
- Electromagnetic radiation testing
- Dust mite and allergen testing
- Combustible gas testing

Please inquire for more information on our full range of services.

All prices are exclusive of 6% tax.

Additional travel and sampling fees may apply outside the Shanghai/Beijing/Suzhou/Chengdu metro area.
