

## Healthy Home

A primary concern of families is the health impact of air and water pollution. At times, outdoor air pollution has exceeded levels set by the EU by over 30 times, and stories of water source contamination have attracted substantial media attention. Homes frequently have high levels of indoor pollutants as a result of materials used in construction and decoration, and there are no legal requirements for a landlord to disclose the history of any previous issues the property may have had. As a result, tenants may be inheriting hidden sources of lead or other toxic chemicals. Conducting air and water quality testing is the only way to identify risks and ensure a safe home environment.

PureLiving has designed this package to give families an audit of their home indoor air and water quality, as well as checking for possible sources of lead contamination and conditions that can lead to mold growth. The package also includes a thorough inspection of any existing air purifiers and HVAC systems.

No mandatory disclosure laws result in hidden problems. Avoid a sick home with hidden dangers like mold, gas leaks, dangerous chemical vapors, and embedded lead.

### Healthy Home package includes:

- English-speaking on-site home inspection and testing for common pollutants
- Test instruments are top-of-the-line calibrated equipment
- Full analysis in easy-to-understand format
- Personal debriefing with recommended solutions to address any shortcomings

### Healthy Home package description:

This program is comprised of three components: **air testing (3 rooms), water testing (1 source), and lead identification testing.**

<b>Air tests include:</b> <ul style="list-style-type: none"><li>● Particulate matter (PM2.5)</li><li>● Total volatile organic compounds (TVOC)</li><li>● Formaldehyde</li><li>● Radon</li><li>● Relative humidity</li><li>● Carbon monoxide</li><li>● Lead</li></ul>	<b>Water tests include:</b> <ul style="list-style-type: none"><li>● Bacteria</li><li>● Chlorine</li><li>● Lead</li><li>● Nitrate</li><li>● Organic pollutants</li></ul> <b>Plus</b> <ul style="list-style-type: none"><li>● Testing for lead content in 2 samples, e.g. indoor paint, outdoor soil, etc.</li></ul>
